DETAILED ACTION

1. Claims 1-5, 7-14 and 16-19 are pending. Claims 6 and 15 have been cancelled.

Response to Arguments

2. Applicant's arguments, see pg. 7, 4th and 5th paragraph of Remarks, filed June 28, 2006, with respect to the rejection(s) of claim(s) 1, 10 and 19 under 35 USC 102 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Hunt et al. (Hunt), U.S. Patent No. 6,496,855.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-2, 10-11 and 19 rejected under 35 U.S.C. 102(e) as being anticipated by Hunt et al. (Hunt), U.S. Patent No. 6,496,855.

As per claims 1-2, 10-11 and 19:

Hunt discloses a method comprising:

generating a user registration page request by a user of a web application and forwarding the user registration page request to an application server (7:28-37, 8:15-26);

By the application server, embedding security data requirements in the user registration page request and forwarding the user registration page request to a user registration page of the web application (7:38-51, 8:15-42);

By the user registration page of the web application, merging the security data requirements from the application server with the user profile registration requirements of the web application to form a user information request page (5:51-6:31);

Sending the user information request page from the web application to the user (7:37-51). returning a filled out user information request page to a pass through server target on the application server (5:56-6:43);

extracting security data from the filled out user information page by the application server and boostrapping a user account in the user database by the application server based upon the extracted security data. Hunt discloses the use of an ID and password, provided by the user, to initiate a new user account in the database (5:12-24, 6:44-52, 8:15-42), which meets the limitation of bootstrapping a user account in the user database by the application server based upon the extracted security data.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Application/Control Number: 09/873,095

Art Unit: 2132

4. Claims 3-5, 7-9, 12-14 and 16-18 rejected under 35 U.S.C. 103(a) as being unpatentable over Hunt et al. (Hunt), U.S. 6,496,855 as applied to claims 1 and 10 above and further in view of Levergood et al. (Levergood), U.S. Patent No. 5,708,780.

As per claims 3 and 12:

Levergood substantially teaches that "the authentication server checks to see if the user qualifies for a new account" (see column 6, line 67 -column 7, line 3), meeting the limitation of making available a set of user security requirements. It would have been obvious to check to see if a user qualified for a new account because this would protect the registration agent of Hunt from hackers and script programs from creating illegitimate accounts.

As per claims 4-5 and 13-14, Levergood substantially teaches a success target and a failure target to provide respective destinations for the bootstrap attempt. These targets are disclosed as URLs capable of being shown in a browser (see Figure 2B; column 7, lines 51-67). It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to have success and failure targets for the bootstrap attempt and to show them in a browser because this would inform the user of a successful or failed attempt to create their account within the database.

As per claims 7-9 and 16-18, Levergood substantially teaches merging the set of security registration requirements and user profile data requirements to collect corresponding user profile data from the user. They are forwarded back, extracted, and stored in a user profile database (see column 6, line 58 - column 7, line 14). It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to collect and merge user profile data and security requirements because this would allow all of the users information to be in one place which

Application/Control Number: 09/873,095

Art Unit: 2132

would make it more convenient for users in giving them a central repository for all of their

information (Hunt, 3:42-67).

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Kristin D. Sandoval whose telephone number is 571-272-7958.

The examiner can normally be reached on Monday - Friday, 8:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Gilberto Barron can be reached on 571-272-3799. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
